LabourPro

Final Requirements & Revision Request

To: Software Engineering / Development Team

Please treat the previously supplied SRS as the initial baseline and revise it before full implementation. The following requirements are the product direction that must be reflected in the final SRS, UX flows, database/API design and development plan.

1. User Roles

• Owner

• Supervisor

• Labour

• Material Supplier

• Food Supplier

2. Attendance

• Labour self-attendance only at assigned site using GPS/geofence.

• Owner/authorized Supervisor can mark attendance from anywhere.

• Workers without phones must be markable by Owner/Supervisor.

• Record source: Self / Supervisor / Owner.

3. Labour & Employment

• Permanent LabourPro ID.

• Search by ID/phone; filter by trade, skill, experience, location, availability and work type.

• Temporary/Permanent employment.

• Statuses: Active, On Leave, Temporary Work Elsewhere, Left Without Notice, Terminated.

• Retain employment history and warn about overlapping temporary engagements.

4. Two-Way Hiring

• Owner/authorized Supervisor can send join/work requests.

• Labour can request to join multiple companies.

• Labour accepts/rejects; employer approval remains required before Active employment.

5. Private Ratings

• Owner/authorized Supervisor ratings: quality, skill, attendance, speed, safety, teamwork, behaviour.

• Private ratings/comments are hidden from labour.

• Employers cannot edit another employer's private feedback.

• Previous employer salary/advance/private financial data must remain private.

6. Supervisor & Permissions

• Supervisor access is site-based unless Owner grants more.

• Owner controls permissions including workers, attendance, leave, advance, hiring, termination and site management.

7. Leave & Advance

• Leave: From/To, type, reason, note; Pending → Approved/Rejected.

• Advance: amount, reason, required date, note; Pending → Approved/Rejected → Paid.

• Requests must use approval workflows.

8. Project Management

• Project: name, client, location, contract value, target margin, estimated cost, start/end dates and stages.

• Stages: dates, budget, target %, supervisor, notes, photos and progress.

• Track labour/material/other cost, total spend, remaining budget, budget vs actual and projected margin.

• Cost analysis by project, stage, month and category; AI delay/budget/margin recommendations.

9. Materials Marketplace

• Categories: Cement, Sand, Metal/Aggregate, Blocks/Bricks, Steel/Rebar, Timber, Plumbing, Electrical, Paint, Tiles, Hardware, Equipment/Machinery, Other.

• Requests route only to suppliers registered for the relevant category; multi-category requests split by category.

• Quotes: unit price, quantity, delivery charge, total, delivery estimate, payment terms and message.

• Accepting one quote closes the other quotes after confirmation.

10. Food Supply Marketplace

• Add Food Supply as a separate marketplace module.

• Route requests only to food/catering suppliers.

• Breakfast, Lunch, Tea and Dinner; date, site, portions, delivery time, food preference and notes.

• Support recurring/daily orders plus quotation, acceptance and delivery tracking.

11. Order & Delivery

• Confirmed → Preparing → Out for Delivery → Delivered.

• Support driver, ETA/live location where available, delivered/damaged quantity, photos and notes.

12. AI & Voice

• AI answers authorized questions on attendance, projects, costs, quotations, progress and workers.

• AI provides reminders, alerts and actionable suggestions.

• Siri/Google Assistant actions obey permissions.

• Sensitive actions require confirmation; voice never grants extra permissions.

13. Owner Subscription

• Up to 3 workers — Free.

• Up to 9 — Rs. 2,500/month.

• Up to 25 — Rs. 5,000/month.

• Up to 49 — Rs. 7,500/month.

• Up to 99 — Rs. 10,000/month.

• Unlimited — Rs. 25,000/month.

• Worker ranges are NOT hard limits. Adding labour must never be blocked.

• Exceeding the plan range sends a notification only; no automatic upgrade or charge.

• If worker count decreases, do not automatically downgrade or reduce price.

• Plan changes require explicit Owner action.

14. UI/UX Direction

• Modern 2026 iPhone-first UI; not an old administrative dashboard.

• Clean typography, generous spacing, rounded cards, subtle depth/glass effects, charts, maps, timelines and image-based project/order cards.

• LabourPro orange as primary action/accent with restrained supporting colours.

• Dashboard prioritizes what needs attention; avoid data overload.

• Consistent design language across Owner, Supervisor, Labour and Supplier apps; use the supplied UI references as visual direction.

15. Required Deliverables Before Full Development

• Final LabourPro SRS v1.0.

• Complete screen list and user flows for all five roles.

• Role & permission matrix.

• Database/ER diagram and core data model.

• API/module list and business rules.

• Subscription and notification logic.

• Marketplace quotation/order state diagrams.

• UI/UX prototype for main flows.

• Development milestones with MVP and later-phase scope.

Important: If any requirement is technically infeasible or conflicts with the current architecture, please identify the conflict, proposed alternative, impact and timeline before implementation.
