LabourPro

MASTER SOFTWARE REQUIREMENTS SPECIFICATION (SRS) v1.0 — FINAL

Engineering Team Source of Truth | Product: LabourPro | Owner-only subscription model

Purpose. This document consolidates the initial engineering SRS supplied by the development team with the product requirements finalized for LabourPro. The engineering team should use this document as the primary product requirements baseline and flag any technical conflict before implementation.

1. Product Vision & Scope

• LabourPro is a construction workforce, project, procurement and site-operations platform designed to connect Owners, Supervisors, Labour, Material Suppliers and Food Suppliers.

• The system must be mobile-first, modern and premium, with role-based access and one consistent LabourPro design language.

• LabourPro must not be tied to one construction company; a labour can maintain a permanent LabourPro identity and work across registered employers under controlled employment records.

2. User Roles

• Owner — full company, project, workforce, procurement, supplier, financial and subscription control.

• Supervisor — assigned-site operations with permissions explicitly granted by the Owner.

• Labour — own profile, current employment/site information, attendance, leave and advance workflows; no private employer ratings/comments.

• Material Supplier — construction material marketplace, quotations, orders, deliveries, products and supplier profile.

• Food Supplier — site food/catering marketplace, quotations, recurring food orders, delivery and supplier profile.

3. Authentication, Identity & RBAC

• Every user has a role and must only access authorized functions.

• Labour has a permanent LabourPro ID.

• Owner controls Supervisor permissions.

• Voice/AI must never bypass role permissions.

• Sensitive actions such as accepting a quotation, payment-related actions or terminating a labour require explicit confirmation.

4. Owner — Core Dashboard & Navigation

• Dashboard must prioritize what needs attention today rather than displaying an overloaded data wall.

• Key information: active workers, active projects/sites, attendance, labour cost, material cost, other cost, total spend, project progress, pending approvals, quotations, orders, alerts and AI insights.

• Owner navigation should include Dashboard, Projects, Labour, Marketplace, Orders and More, with role-appropriate secondary screens.

• Dashboard should use compact charts, maps, progress indicators, timelines, alerts and image-based cards where useful.

5. Supervisor

• Supervisor can access assigned sites and assigned operational information.

• Functions may include dashboard, labour list, attendance, leave/advance requests, site progress, tasks, photos, reports, site location/live view, messages and labour management.

• Owner-controlled permissions include View Workers, Mark Attendance, Approve Leave, Approve Advance, Hire Labour, Terminate Labour, Site Management and other configurable actions.

• Supervisor must not receive permissions automatically merely by being assigned to a site.

6. Labour Profile & Employment

• Profile fields include name, photo, phone, ID, trade/job role, skills, experience, joining information, emergency contact, current site/employer and status.

• Search/filter fields for employers: trade, skills, experience, location, availability and work type.

• Employment types: Temporary and Permanent.

• Statuses: Active, On Leave, Temporary Work Elsewhere, Left Without Notice, Terminated, plus appropriate ended/inactive history.

• Employment history must preserve previous employers and work periods.

• Temporary engagements must have start/end dates and overlapping engagements should trigger a warning.

7. Two-Way Labour Hiring

• Owner/authorized Supervisor can search by LabourPro ID or phone and send a join/work request.

• Labour can search/request to join multiple registered companies.

• Labour can Accept or Reject incoming requests.

• Employer-side approval remains authoritative; employment becomes Active only after required approval.

• Both sides can specify Temporary or Permanent engagement.

8. Labour Leaving / Termination

• Labour can submit Leave This Owner with reason and last working date.

• Owner receives the request and can confirm.

• If labour leaves without informing, authorized management can mark Left Without Notice.

• Authorized Owner/Supervisor can mark Terminated.

• Employment history must retain the event and relevant dates.

9. Private Ratings & Employer Feedback

• Authorized Owner/Supervisor can record Work Quality, Skill, Attendance/Punctuality, Work Speed, Safety, Teamwork and Behaviour.

• Private employer ratings and employer-to-employer comments must not be visible to the labour.

• An employer cannot edit another employer's private rating/comment.

• New authorized employers may view permitted verified work reputation/history.

• Previous employer salary, advance and private financial information must never be exposed to another employer.

10. Attendance & GPS

• Labour self-attendance is allowed only when physically at the assigned site using GPS/geofence verification.

• Owner and authorized Supervisor can mark attendance from anywhere.

• Workers without mobile phones must be markable by Owner/Supervisor.

• Attendance record must identify source: Self / Supervisor / Owner.

• Support Present, Absent and Leave states.

• Attendance UI should show assigned site, current distance/location state and a clear Mark Present action for self-attendance.

11. Leave & Advance Requests

• Leave request: From, To, Leave Type, Reason, Note; status Pending/Approved/Rejected.

• Advance request: Amount, Reason, Required Date, Note; status Pending/Approved/Rejected/Paid.

• Requests are workflows; submitting a request must not directly change the final approved state.

• Approval rights follow Owner-configured Supervisor permissions.

12. Project Creation & Management

• Required project fields: Project Name, Client Name, Site Location, Total Project/Contract Value, Target Margin %, Estimated Cost, Project Start Date, Planned End Date and Project Stages.

• Example stage library may include Site Preparation, Foundation, Structural Work, Block Work, Plastering, Electrical, Plumbing, Roofing, Flooring, Painting, Finishing and Handover; Owner can add/edit custom stages.

• Each stage supports start date, target end date, budget, target %, assigned Supervisor, notes, photos and progress %.

• Project dashboard must show overall progress, total spend, labour cost, material cost, other cost, remaining budget, target margin vs projected/current margin and delay/timeline risk.

13. Project Cost & Reports

• Track labour, materials and other costs separately.

• Owner must see cost by project, stage, category and month.

• Show budget vs actual and stage budget vs actual.

• Show labour breakdown by trade and material breakdown.

• Reports must support project-level operational and cost visibility.

14. AI Suggestions & Alerts

• AI should analyze project dates, stage progress, costs, labour and material spending and produce reminders, alerts and suggestions.

• Examples: Stage Delay Risk, Margin Alert, Material Suggestion, Labour Suggestion, upcoming-stage/order/report reminders.

• AI recommendations should explain why the alert exists and what action is recommended.

• AI must respect all role permissions and data privacy.

15. Materials Marketplace

• Material categories: Cement, Sand, Metal/Aggregate, Blocks/Bricks, Steel/Rebar, Timber, Plumbing, Electrical, Paint, Tiles, Hardware, Equipment/Machinery and Other.

• Owner creates a material requirement with site, material, category, quantity, unit, required date, specification and notes.

• Request routing is category-specific: a Cement request goes only to registered Cement suppliers, etc.

• Multi-category requests should split into separate category requests.

• Supplier quote fields: Unit Price, Quantity, Delivery Charge, Total Amount, Estimated Delivery, Payment Terms and optional message.

• Owner can compare quotations.

• Acceptance must use confirmation: accepting one quote automatically closes/declines other quotes for that request.

16. Supplier Management

• Supplier profile: company name, contact person, phone, email, address, registration details, supplied categories/materials, payment information where required and status.

• Supplier can manage products, incoming requests, quotations, accepted orders, deliveries, analytics, profile and ratings.

• Supplier can view only permitted supplier-side information and must not access labour/private Owner data.

17. Order & Delivery Lifecycle

• Accepted order lifecycle: Confirmed → Preparing → Out for Delivery → Delivered.

• Support driver details, ETA, live location where available, delivery timeline and delivery confirmation.

• Delivery confirmation supports delivered quantity, damaged quantity, photos and notes.

• Owner can view order history and status.

18. Food Supply Marketplace

• Food Supply is a separate marketplace category/module alongside Materials.

• Food requests route only to registered food/catering suppliers.

• Support Breakfast, Lunch, Tea and Dinner.

• Food requirement supports site, date, portions/quantity, delivery time, food preference and notes.

• Support recurring/daily food supply orders.

• Food supplier quote should support menu/food description, price per portion, quantity, delivery charge, total, delivery time, payment terms and notes.

• Food orders follow quotation acceptance and delivery tracking.

19. Food Supply AI / Attendance Link

• Where appropriate, LabourPro can compare expected/active workers with food order quantities.

• Example: if 34 workers are expected but 25 lunches are ordered, show an alert/suggestion to review the quantity.

• Food recommendations must be suggestions; Owner remains responsible for confirmation.

20. Marketplace & Order Notifications

• Owner notifications: new supplier response, quotation updates, order status, delivery events, important project/attendance alerts and subscription plan notices.

• Supplier notifications: new relevant request, request update, quotation status, accepted/closed request and order/delivery events.

• Labour notifications: employment request, acceptance/rejection, site assignment/change, leave/advance status and important site-related notifications.

• Notifications must be role-specific.

21. AI & Voice Assistant

• Support Siri/Google Assistant style voice invocation for authorized LabourPro actions.

• Examples: attendance summaries, project cost questions, pending quotation requests, temporary labour requests and project budget checks.

• Labour voice actions can cover own salary/payment/leave information where implemented.

• Supervisor voice actions must be restricted to assigned sites and permissions.

• Sensitive commands require confirmation.

22. Subscription — Owner Only

• Only Owner accounts are subscription-controlled.

• Up to 3 active workers: Free.

• Up to 9 workers: Rs. 2,500/month.

• Up to 25 workers: Rs. 5,000/month.

• Up to 49 workers: Rs. 7,500/month.

• Up to 99 workers: Rs. 10,000/month.

• Unlimited workers: Rs. 25,000/month.

• Worker ranges are reference ranges, NOT hard limits. Adding a labour must never be blocked.

• If current active-worker count exceeds the plan range, send a notification only. Do not auto-upgrade and do not auto-charge.

• If active-worker count decreases, do not auto-downgrade and do not automatically reduce the price.

• Upgrade/downgrade happens only after explicit Owner action.

• Inactive/former/terminated workers should not be treated as active-worker capacity unless product rules explicitly define otherwise.

23. UI/UX Design System

• Mobile-first, premium 2026 iOS/SaaS visual language.

• Use the user's supplied reference images as the visual direction: clean layouts, strong typography hierarchy, generous spacing, rounded surfaces, subtle depth/glass effects, modern charts, maps, image-led cards and minimal navigation.

• Avoid old-style enterprise forms, dense tables and excessive boxes.

• Use LabourPro orange as the main action/accent colour with restrained supporting colours.

• Use clear success/warning/error states and accessible contrast.

• Role-specific screens may differ in content but must share the same design system.

24. Security, Privacy & Access Rules

• Strict role-based access control.

• Labour cannot view other labourers' private information.

• Labour cannot view private employer ratings/comments.

• Supplier cannot view labour/private site-management data outside authorized request/order context.

• Owner can view company-wide information subject to account permissions.

• Sensitive actions require explicit confirmation and audit logging where appropriate.

• All private financial/employer data must be segregated by authorization.

25. Notifications & Auditability

• Important changes should create role-appropriate notifications.

• Actions such as hiring, termination, quotation acceptance, approvals and delivery confirmation should have traceable records.

• System should retain timestamps and responsible user/source for important operational events.

26. Main Screen Inventory

• Owner: Dashboard, Projects, Project Details, Stages, Labour Search, Labour Profile, Hiring Request, Employment History, Attendance, Leave, Advance, Supervisors, Permissions, Marketplace, Material Request, Quotes, Quote Details, Orders, Delivery Tracking, Food Supply, Reports, AI, Notifications, Subscription, Profile/Settings.

• Supervisor: Dashboard, Assigned Sites, Labour, Attendance, Requests, Site Progress, Tasks/Photos where enabled, Reports, Live Site, Messages, More.

• Labour: Home, My Profile, Current Employment, Current Site, Attendance, Leave, Advance, Join/Work Requests, Employment History basics, Notifications, Settings.

• Material Supplier: Dashboard, Incoming Requests, Request Details, Send Quote, Orders, Delivery Tracking, Products, Analytics, Profile/Ratings, Notifications.

• Food Supplier: Dashboard, Food Requests, Request Details, Menu/Products, Send Quote, Orders, Delivery Tracking, Recurring Orders, Analytics, Profile/Ratings, Notifications.

27. Engineering Deliverables Before Full Implementation

• Final SRS v1.0 confirmation.

• Complete screen-by-screen user flows for all five roles.

• Role & permission matrix.

• Database schema/ER diagram covering users, employment, sites/projects, stages, attendance, requests, leave, advances, ratings, suppliers, products, quotations, orders, deliveries, food orders, notifications, AI actions and subscriptions.

• API/module specification and state transitions.

• Subscription and notification business logic.

• Marketplace quotation/order state diagram.

• UI/UX prototype following the supplied reference style.

• MVP vs Phase 2 implementation plan.

• Security/privacy model and audit requirements.

• Development milestones, dependencies, testing plan and acceptance criteria.

28. Core Business Rules — Quick Reference

Rule	Required Behaviour
Labour addition	Never block adding a labour because of subscription range.
Plan exceeded	Notify Owner only; no automatic upgrade/charge.
Workers decrease	No automatic downgrade or price reduction.
Attendance self	GPS/geofence required at assigned site.
Attendance Owner/Supervisor	Can be marked from anywhere if authorized.
No-phone labour	Owner/Supervisor can record attendance.
Hiring	Request → Accept/Reject → Employer approval → Active.
Private ratings	Visible only to authorized employer-side users.
Material routing	Only suppliers registered for the requested category.
Quote acceptance	Accept one → close other quotes after confirmation.
Food routing	Food requests only to Food Suppliers.
AI/Voice	Cannot bypass permissions; sensitive actions need confirmation.
Supervisor	Access governed by Owner-configured permissions.

Final instruction to engineering team: Use this document as the consolidated product requirements baseline. Do not treat the initial SRS's "future features" list as exclusions where this document explicitly requires the feature. If implementation constraints require a change, raise the issue for product approval before changing the business rule.

LabourPro — People. Projects. Progress.
